## **Sunnylands Charollais Stud**

Established in 2014, the Sunnylands Charollais Stud has now been producing purebred Charollais sheep for seven seasons. The Sunnylands Charollais Stud began with an extensive embryo and artificial insemination program, and we have continued to grow the stud over the subsequent lambing seasons. Last year we welcomed the inclusion of the Charollais breed in the Australian stud book, and Sunnylands' details can be found under stud number 4.

We continue to be impressed by what the Charollais breed has to offer, particularly as a terminal sire. We have personally had excellent results using Charollais' over our Poll Dorset, White Suffolk and Ryeland ewes, and elsewhere Charollais sires have been used over a variety of breeds with excellent results. As a terminal sire, Charollais produce early maturing, fast finishing lambs. The lambs have an excellent dressing percentage due to a high meat to bone ratio. Their wedge shape makes for easy lambing, and therefore are a good choice over maiden ewes and ewe lamb hoggets.

Sunnylands Charollais' is a partnership between Paul Day of Sunnybanks (Poll Dorset and White Suffolk Studs) and Nigel and Diana Wade of Capelands (Poll Dorset and Ryeland Studs). The Day and Wade families have a multi-generational history of producing quality stud sheep, with over seventy years of experience between them.

Sunnylands Charollais' have both pure and composite Charollais rams available for sale.

## Why Choose Charollais

- Easy lambing (wedge shaped)
- Great carcass (long loin and large hindquarter)
- Good dressing percentage (high meat to bone ratio)
- Fast growing and early maturing lambs
- Active rams (100% conception rate in our 2021 lambing season)
- Great tasting meat (high intramuscular fat and low subcutaneous fat)
- Nice, tight, short wool and clean points (lower flystrike risk)
- Ewes with strong maternal instincts and lambs quickly on their feet and mobile

## Lambplan Traits

Abbreviation	Trait Name	Abbreviation	Trait Name	Abbreviation	Trait Name
BWT	Birth Weight	PWWT	Post Weaning Weight	PEMD	Post Weaning Eye Muscle Depth (mm)
WWT	Weaning Weight	PFAT	Fat Depth	TCP	Terminal Carcass Production Index

### TERMINAL CARCASS PRODUCTION (TCP) INDEX

- Carcase Plus has been an important index for the sheep meat industry but it has been found to have a negative impact on eating quality. Because of this and the industry's focus on delivering high eating quality outcomes for consumers, the index retired in March 2020.
- Carcase Plus was replaced with the Terminal Carcase Production Index.
- The Terminal Carcase Production (TCP) index will give similar improvements in growth and lean meat yield as Carcase Plus while also maintaining eating quality.

### WHAT IS THE TCP INDEX

Indexes help producers select animals for use within a breeding program when there are a range of traits of economic or functional importance. This ensures that genetic gain in one trait is not made in isolation from other traits. Using indexes in ram purchasing decisions allow producers to make balanced genetic progress towards more profitable sheep.

The TCP index has been created to assist producers to achieve both gains in their major production traits, such as post-weaning weight and muscling, as well as ensuring consumer satisfaction from lamb is maintained through focusing on key eating quality traits such as shear force (tenderness) and intramuscular fat (marbling).
